

Ngô Minh Chung

Smart Contract Engineer

An Information Security-driven Web3 Engineer focused on writing secure smart contracts, building automated deployment scripts, and integrating AI workflows into decentralized applications.

TECHNICAL SKILLS

Programming	Solidity, TypeScript, JavaScript, Rust (basic).	Blockchain & Web3	EVM (Base, Optimism, Arbitrum), X Layer, Foundry, Hardhat, OpenZeppelin.
Backend / Infra	Node.js, Automated Scripts (JS/TS).	DevOps / Tools	Git, Automated Deploy & Verify Scripts.
AI-Assisted	Local LLMs Deployment, Advanced tooling with OpenCode.	AI & Agents	On-chain AI Agent Monitoring, Agentic Workflows.

WORK EXPERIENCE & FEATURED PROJECTS

Blockchain Security Intern / Apps Cyclone 03/2026 – Present
Blockchain Solution Development Company Ho Chi Minh City, Vietnam

- Developed and reviewed secure smart contracts for production, mitigating risks before deployment.
- Automation:** Built automated TS/JS scripts to streamline contract deployment and verification pipelines.
- Researched gas optimization patterns, state variable layouts, and on-chain threat prevention mechanisms.

DeFi-Vault-System 2026
NFT-Powered Term Deposit Protocol (Personal Project) Solidity, Hardhat, TS

- Architected a modular savings protocol separating business logic (*SavingCore*) from liquidity storage (*VaultManager*) to fully isolate smart contract execution risks.
- Programmed custom snapshot mechanisms locking yield rates (APR) inside ERC-721 metadata at the minting timestamp, enforcing mathematical immutability against pool updates.
- Handled auto-renewal flows with a 3-day grace period, using Basis Points for granular time-based yield calculations and implementing strict emergency pause rules.

Solana Guardian AI Agent 2026
Solana Agent Economy Hackathon Project TypeScript, AI Agent

- Developed an AI agent for real-time security monitoring, protocol logging, and anomaly detection on the Solana network.
- Engineered automated pipelines to evaluate transaction profiles and trigger instant cryptographic mitigation alerts.

Blockchain CTF Competitions 2024 – 2026
Ethernaut, H7, ECW, Securinets, QnQSec,.. Security Competitor

Certificates & Professional Training 2026
Cyfrin Updraft Web3 Security Education

- Cyfrin Updraft Certificates:** Successfully completed *Smart Contract Development* and *Wallet Security* tracks.
- Advanced Training:** Currently pursuing the intensive *Advanced Smart Contract Auditing* path.

SKILLS

Smart Contract Architecture

Security-First Mindset

Vulnerability Analysis

Automated Testing

Problem Solving

Discipline & Teamwork
